

would unwrap the students to find out how many were still breathing. If any had come close to suffocation they were put back into the room with no coats at all and the cold revived them. Any who did not responde to the cold were placed in boxes and left until spring.

Mr. Dunzweiler rode a bicycle to school through the sleet and snow and icy roads. The Editor recalls the day he came in and the icy wind had curled up his upper lip and frozen it to his nose..he looked like a man with a tooth moustache. Coming into the building did not do much to warm one up and the only way of getting really warm was to irritate a professor and when he fired away at you you stood as close as possible to his breath. It seemed a little to chummy for some but to get a bit of warmeth was a privilege no one could just forego. To save the marble in the main hall, water was spilled on it and it froze in about 10 seconds so we could slide from class to class. Ice skates were not allowed, of course, as the tips of them, it was feared, would puncture a steam line and let a little heat into the rooms. Of course the whole motif in this was in the thought that when the brain is cold it works at a more efficient degree, mostly trying to think how to get warm.

And if you think the present work is heavy, what we are doing today is all heart and soul. In my day the faculty got together to see how many tests they could give on the same day. If there were three big ones scheduled at least two other professors would change their agenda to get 'em in on time. There was some kind of monetary reward for the professor with the lowest median grade for his students each quarter and the boys would do anything to earn it. Once two tests were assigned for the same hour and when a student complained he was told that if he had not learned to be in two places at the same time he was not fit for the ministry- The tests were long, too. Some of the objective tests used rolls of newspaper stock and you sat at a long table while a crank rolled it out ad seriatum. If you did not write fast enough your hand would get caught in the rolling paper and you would
